01 · OVERVIEW

One board for everything on my plate

My Board is a mobile-first task and notes tracker designed to manage work across several areas from one screen. It groups tasks into color-coded accounts, shows live status counts, flags overdue items, and stores meeting notes with an AI-generated summary of key points.

02 · THE PROBLEM

Follow-ups were slipping through the cracks

My tasks and meeting notes were spread across chats, notebooks and separate apps, so follow-ups slipped and I lost time hunting for decisions. I wanted one place on my phone that answers three questions quickly:

?

What is still open, and what is overdue?

?

Which area does each task belong to, and who owns it?

?

What was agreed in a meeting, without rereading the full notes?

03 · KEY FEATURES

■ Accounts

Color-coded groups for each client or project with a quick switcher, add button and reorder option.

■ Status dashboard

Tappable tiles for All tasks, To do, In progress, Done and Call notes; each tile filters the list.

■ Task cards

Account, status, due date, overdue count, owners and a High priority tag; finished tasks are struck through.

■ Add account

A short form with a name and optional contact, so a new area takes seconds to set up.

■ Call notes

Filters for Today, Last 7 days, Last 30 days or a custom range, plus title search and per-account filters.

■ AI summary

A collapsible summary of key points per note, with timestamps that link back to the moment in the call.

■ English and Spanish

The full app is available in English and Spanish, so users can work in the language they prefer.

Six choices that shaped the experience

01

Mobile first

Built for one-handed phone use with large tap targets.

02

Counts before lists

Status tiles show workload at a glance.

03

Red overdue, struck-through done

Urgency and progress visible without opening a task.

04

Accounts as the main filter

One switcher scopes both tasks and notes.

05

Summaries over transcripts

AI key points with timestamps make a 30-min call reviewable in under a minute.

06

Dark mode by default

Easier on the eyes, with one-tap light mode.

05 · SKILLS DEMONSTRATED

Product thinking

UX and UI design

AI integration

Data organization

Building and iterating

Outcome

Track as many tasks, areas and meeting notes as you need, with no limit, and see everything that is open, overdue or done from one screen.
